

## Pediatrics

### Overview

The initial search was done by a librarian experienced in literature retrieval. It was done in English only and initially used the terms “chiropractic” AND “pediatric” or “paediatric” or “child” or “infant.” Articles primarily addressing infertility, pregnancy or childbirth were not included (Infertility was included in the nonmusculoskeletal condition search and pregnancy and childbirth were included in a separate search for articles related to pregnant women). Databases searched included Medline, MANTIS, CINAHL, and Index to Chiropractic Literature, with no beginning cut-off date and an end date of 2004. Hand searches and reference tracking were also performed, and input was requested from academic faculty and practitioners who were knowledgeable in this topic area. A total of 241 articles were identified through these means.

Inclusion criteria were applied to these 241 articles, with the following results:

Initial results of literature search	241
published in a peer-reviewed journal	215

The following study designs were found in the resulting 215 articles:

Expert opinion (instructional/tutorials) citation list follows	30
Case series (> 1 case, clinical observations) citation list follows	26
Case reports (single case clinical observations) citation list follows	97
Designed studies citation list follows	62
1 Descriptive cross-sectional studies (predominantly surveys)	16
2 Literature reviews/annotated bibliographies	10
3 Systematic reviews	3
4 Analytic observational studies, cross-sectional	6
5 Analytic observational studies, longitudinal	8
6 Small experimental (including pilots), single group (pre-experimental) or quasi-experimental (non-randomized)	13
7 RCTs	6
